

ASX Announcement

24 January 2025

Director Appointment

Artemis Resources Limited (ASX/AIM: ARV) is pleased to confirm that Mr Julian Hanna's appointment as Managing Director is effective from today, following LSE AIM market clearance.

Mr Hanna was the Co-founder and Managing Director of Western Areas Ltd for 12 years from 2000. He then joined MOD Resources Ltd as Managing Director for 7 years from 2013 before joining Sandfire Resources Ltd in 2019 following its takeover of MOD Resources as Director External Relations. Between 2022 and 2024 Mr Hanna acted as GM Growth and Development for St George Mining.

This announcement has been approved by the Board of Artemis for release to the ASX.

About Artemis Resources

Artemis Resources (ASX/AIM: ARV) is a gold, copper and lithium focused resources company with projects in the north Pilbara region of Western Australia. The Company's main projects include;

- Karratha Gold Project including the significant Carlow Castle gold/copper deposit
- Karratha Lithium Project including the high-grade Mt Marie Lithium Prospect and the Osborne Lithium JV (Artemis 49%; GreenTech Metals (ASX:GRE 51%)
- Paterson Central Gold/Copper project in the Paterson Province (adjacent to Greatland Gold's gold-copper discovery at Havieron and only ~42km from the Telfer gold mine)
- Artemis also owns the Radio Hill processing plant, located 35km from Karratha

Artemis is focused on discovering multiple gold prospects within its +200km² tenement package that can build upon the initial Mineral Resource at Carlow. The majority of the tenement package has been lightly explored and is now the subject of methodical exploration programs to identify and drill test high priority targets associated with outcropping gold mineralized veins, adjacent alteration halos and EM anomalies associated with prospective geological structures.

Artemis will also continue to progress the Karratha Lithium Project to follow up encouraging early results within the highly fertile Andover lithium corridor which extends ~12 km across Artemis 100% and JV holdings. This is expected to lead to drilling of the most advanced targets in due course.
