

Unlocking the Kalahari Copper Belt Botswana

121 | Cape Town
February 2025

This presentation has been approved by Cobre's CEO

Disclaimer

Not for release to US wire services or distribution in the United States.

This investor presentation has been prepared by Cobre Limited (ACN 626 241 067).

This presentation is for information purposes only. This presentation is not a prospectus nor an offer for securities in any jurisdiction nor a securities recommendation. The information in this presentation is an overview and in summary form, has not been independently verified and does not contain all information necessary for investment decisions. This presentation does not constitute investment advice and has been prepared without taking into account the recipient's investment objectives, financial circumstances or particular needs and the opinions and recommendations in this presentation are not intended to represent recommendations of particular investments to particular persons.

The information contained in this presentation has been prepared in good faith by Cobre Limited, however no representation or warranty expressed or implied is made as to the accuracy, correctness, completeness or adequacy of any statements, estimates, opinions or other information contained in this presentation. Cobre Limited is not responsible for providing updated information and assumes no responsibility to do so. Recipients should conduct their own investigations, perform their own analysis and consult their own legal, business and/or financial advisers in order to satisfy themselves as to the accuracy and completeness of the information, statements and opinions contained in this presentation.

To the maximum extent permitted by law, Cobre Limited, its related bodies corporate, and each of their directors, officers, employees, and advisers disclaim all liabilities (however caused, including negligence) for any loss or damage which may be suffered by any person through the use or reliance on anything contained in or omitted in this presentation.

Certain information in this presentation refers to the intentions of Cobre Limited, but these are not intended to be forecasts, forward looking statements or statements about future matters for the purposes of the corporations act or any other applicable law. The occurrence of events in the future are subject to risks, uncertainties and other factors that may cause Cobre Limited's actual results, performance or achievements to differ from those referred to in this presentation. Accordingly, Cobre Limited, its related bodies corporate, and each of their directors, officers, employees, agents and advisers do not give any assurance or guarantee that the occurrence of the events referred to in the presentation will actually occur as contemplated.

For full exploration results including relevant JORC Table information and Competent Persons Statements referred to in this Company Presentation, refer to the Company's announcements lodged with the ASX, specifically those commencing from 27 July 2022.

Shareholder Structure

Share Price Performance

Strong Leadership

Martin C Holland

Executive Chairman

Mr Holland is a mining executive with over 15 years of corporate experience. Mr Holland is founder and Executive Chairman of Cobre. In addition Mr. Holland is a Non-Executive director of Armada Metals (ASX: AMM) and the founder and former CEO of Lithium Power International (ASX: LPI).

Mr. Holland has listed five ASX-listed exploration companies and has been an executive director in multiple companies that have collectively raised over A\$200M+ for exploration, focusing on new future metals discoveries.

Adam Wooldridge

Chief Executive Officer

Mr Woolridge is a founding partner and CEO of KML and has played an active role in developing the Company's exploration projects over the last seven years.

An experienced geophysicist and geologist with over 28 years' experience in Africa, the Middle East and Europe, he has worked in exploration management and consulting positions across a variety of deposit types specialising in large-scale multi-disciplinary target generation.

Dr Ross McGowan

Non-Executive Director

Dr Ross McGowan is the CEO and Managing Director of ASX-Listed copper-nickel explorer, Armada Metals Limited (ASX: AMM). He is also a Non-Executive Director of Cobre and is the founder of the Resource Exploration & Development Group.

Ross has been involved corporately, technically and academically with the mining industry in Africa for over 20 years and was a member of the original Kamoia (DRC) discovery team, with Ivanhoe Mines, and is a co-recipient of the 2015 PDAC Thayer Lindsley Award for an international Mineral Discovery. He conducted his PhD research on the sediment-hosted copper deposits of the Zambian Copperbelt.

Michael McNeilly

Non-Executive Director

Mr McNeilly is an experienced corporate financier having advised several private, Main Market listed, AIM quoted and ISDX listed during his tenure at Arden Partners (AIM: ARDN) and Allenby Capital respectively.

Currently CEO of Strat Plc.

Nominee Non-Executive Director appointed by Strata.

Non-Executive Director – Armada Metals Ltd (2021).

Non-Executive Director - Connemara Mining Company plc (2018).

Non-Executive Director of MOD Resources Limited (2018).

Michael Addison

Non-Executive Director

Mr Addison has a long history of involvement in the Australian and international mining industry, having been instrumental in the founding of two former ASX-listed Australian mining companies: Endocoal Limited (formerly Atlas Coal Limited) and Carabella Resources Limited.

Most recently he was the founding director of ASX-listed Genex Power Limited, a company focused on electricity generation and storage solutions.

Andrew Sissian

Non-Executive Director

Mr Sissian is a seasoned corporate and capital markets executive and CPA.

Mr Sissian is a co-founder of Cobre and CEO and co-founder of high growth IoT technology company Procon Telematics.

Mr Sissian advises and partners with a range of companies in the technology and future minerals sectors.

Mr Sissian spent more than a decade in equities and acquisition finance including with the National Australia Bank in Australia and Shanghai and with Wilsons.

Kalahari Copper Belt

COBRE 

Why The Kalahari Copper Belt?

In 2023 KCB becomes a copper producing district:
Khoemacau Copper Mine and exploration assets sold for 1.9 B\$ to MMG ¹;
Sandfire's Motheo Production hub starts production in record time.

KCB remains underexplored and is regarded as one of the world's most prospective areas for yet-to-be-discovered sediment-hosted copper deposits by the US Geological Survey.²

Botswana ranks in the top 10 countries globally for **mining investment attractiveness** by Fraser Institute 2023.³

Giant Deposits – 1/3 of known sediment-hosted copper deposits contain 500,000t of contained copper with grades >1%.

Excellent infrastructure, well-developed road networks and ongoing multi-million-dollar projects, including the North-west Transmission Grid Connection (NWTGC) aimed at providing power supply to new KCB mines.

Core logging, Ngami

Kalahari Copper Belt – Significant Opportunity Under Cover

Copper-silver discoveries in the Kalahari Copper Belt by decade and primary discovery tool

Belt-Scale Opportunity

100%-ownership

of highly-prospective copper and silver exploration tenements in the KCB.

Second largest tenement package in the Botswana KCB

consisting of four highly strategic project areas

Along strike, and adjacent to, producing mining operations

MMG's high-grade Zone 5 Cu-Ag deposit¹ and Sandfire's T3 Motheo Cu-Ag Production Hub².

Target unexplored basin margins and strike extension of known deposits

ideal geological position for sedimentary copper deposits

[1. Khoemacau – MMG](#)

[2. Motheo - Sandfire](#)

03 /04

Three-Pronged Approach to Discovery

Seismic Survey, Kittlanya West

Explore Big

Identify the next tier 1 deposit through BHP Earn-in to Joint Venture

Strategic Target Drilling

Potential for short-term discoveries

Development Potential

Prove viability for copper-silver extraction using in-situ recovery

1. Explore Big : Finding The Next Tier 1 Deposit

- ➔ Cobre is currently negotiating an Earn-in to Joint Venture Agreement with BHP

Oblique 3D view illustrating AGG inversion results: Blue shells = interpreted sub-basins with prospective margins; orange shells = interpreted basement highs. Seismic results expected to image tier 1 trap-sites and feeder structures related to the anomalous copper identified in drilling to date.

Big thinking discovery focussed exploration with support from BHP

- Focus on Kitlanya Basin Margin Projects

Priority setting for most large sedimentary copper deposits

- Target Preserved Fold Hinge Setting

Ideal site for upgrading mineralisation providing potential for Tier 1 Discoveries

- Technology Driven Approach to Discovery

Combination of active and passive seismics combined with Airborne Gravity Gradient (AGG) Survey

2. Strategic Target Drilling : Okavango Copper Project

Drilling Targets along Strike from MMG's Zone 5 Production

- ✓ Strike extension from MMG's production hub
- ✓ 39% of the remaining unexplored prospective contact, NE KCB
186km of prospective contact
- ✓ Comparable gravity signature to Zone 5 area
Evidence of sub-basins and intra-basin highs
- ✓ Three new anomalous copper-silver zones intersections include vein hosted mineralisation

Strategic Target Drilling: Along Strike from MMG

Anomalous Vein Hosted Copper Sulphides (see ASX announcement 13 August 2024)

3. ISCR Development Opportunity

➔ 40km Strike of Copper Silver Mineralisation

Consistent chalcocite mineralisation intersected along extensive strike lengths

Structurally controlled high-grade intersections include:

9.3m @ 3.4% Cu and 30g/t Ag (downhole)

10.7m @ 1.3% Cu and 18g/t Ag (downhole)

10.0m @ 1.3% Cu and 28 g/t Ag (downhole)

A

Ngami Copper Project

Exploration and infill drilling underway

- ✓ Exploration drilling identifies new priority Cosmos target
- ✓ Ongoing infill resource drilling designed to bring first portion of the Comet target into JORC category

	Tonnage			Cu%			Category
	Mean	Min	Max	Mean	Min	Max	
	23.4 Mt	18.3Mt	28.4Mt	0.50%	0.45%	0.55%	Exploration Target 1
	111 Mt	85Mt	137Mt	0.40%	0.36%	0.43%	Exploration Target 2

— — Untested contact: ~20km

↑
Confidence

Essential Criteria for In-Situ Copper Recovery

Mineralisation suitable for Acid Leaching:

Fine-grained chalcocite ideal for hydrometallurgical processes.

Fractures and cleavages enhance fluid flow for leaching.

Metallurgical tests confirm high copper and silver recoveries with low acid consumption.

Ore Body below Water Table:

Water table at 130m to 140m below the surface.

Optimal depth below Kalahari cover.

Majority of orebody below the water table.

Suitable Host Rock Permeability

Detailed fracture logging, AI-driven fracture modelling and hydrogeological drilling, injection and pump tests reveal:

- ✓ High-density fracture zone associated with the mineralisation.
- ✓ Competent footwall and hanging-wall rocks provide lateral seals.
- ✓ Interconnected fracture orientation facilitates fluid flow parallel to and along the mineralised contact zone.

Chalcocite mineralisation from Cobre's Ngami Copper Project, Botswana (~11% Cu)

Active Pump Tests Prove Hydrogeology

Injection and pumping, Ngami Copper Project

Drilling of injection and monitoring wells
into the primary mineralised fracture zone and less permeable hangingwall and footwall completed

Injection
of water demonstrates amenable permeability of mineralised fracture zone for natural injection

Injection and pumping
used to model fluid movement between strategically placed injection, pumping and monitoring wells to create 3D fluid flow model

Results provide key information for engineering, process design and financial modelling

Injection/Pumping Testing Proves Hydrogeology

Metallurgical test work returns high copper-silver recoveries

- ✓ Bottle roll test recoveries up to 90.7% copper with minimal reagent consumption
- ✓ Long-term leach-box tests designed to simulate in-situ environment in progress

Injection well drilling, Ngami Copper Project

In-Situ Copper Recovery :

Metallurgical, Engineering and Financial Modelling

Completed

Gap Analysis – confirms viability of ISCR model

Trade-off study – confirms ISCR presents optimal extraction method

Engineering and Financial studies confirm ISCR as a viable extraction method

Hydrogeological test work demonstrates viability for injection and recovery into mineralised contact

Metallurgical test works confirms copper and silver mineralisation is readily leachable

Exploration drilling confirms further extensions to known copper-silver mineralisation

Ongoing

Metallurgical leach box tests estimate in-situ recoveries

Infill drilling to move first portion of Comet target into JORC category

04/04

Australia High Purity Quartz

High Purity Quartz (HPQ): Exploration Target

- Multiple Quartz Units identified and sampled across the Perrinvale Project supporting a significant estimated JORC Exploration Target of 5.1 Mt to 28.3 Mt at a pre-beneficiation SiO₂ grade of 99.1% to 99.6%

1

Maiden High Purity Quartz Exploration Target

Table 1: Southern Panhandle HPQ Exploration Target on the Perrinvale Project in Western Australia.

Southern Panhandle HPQ Exploration Target						
	Surface Area Estimate (m ²)	Depth extent (m)	Quartz surface area factor	Insitu Bulk Density (g/cm ³)	Million Tonnes	SiO ₂ %
Lower Case	271,650	15	0.5	2.52	5.1	99.1
Upper Case	271,650	40	1	2.6	28.3	99.6

Grades are based on rock chip samples analysed via XRF and prior to beneficiation

- All SiO₂ assays fall within the feedstock grades for silicon smelting, with 94% of assays between 99.15% and 99.66% SiO₂
- Beneficiation testing and TIMA-SEM mineral deportment work has commenced

1. The potential quantity and grade of the Exploration Target is conceptual in nature, and there has been insufficient exploration to estimate a Mineral Resource and it is uncertain if further exploration will result in the estimation of Mineral Resources. The Exploration Target has been prepared by the Company and reported in accordance with the 2012 edition of the JORC Code.

Refer: [ASX announcement dated 7 October 2024 for full JORC reporting details](#)

Investment Opportunity

Strategic Belt-Scale Land Package

Opportunity for Tier 1 Discoveries.

Opportunity for Near Term Wins through Strategic Target drilling

Opportunity for Low OPEX, Low CAPEX Copper-silver ISCR development

Top African Mining Jurisdiction:

Botswana ranks top 10 globally for mining investment attractiveness; exceptional discovery to production record.

Large-scale Australian HPQ project

Additional low-cost critical mineral opportunity

Surveying drill collars, NCP

Appendix B: High Purity Quartz A Critical Source Of Silicon

- As technology develops and the world is moving towards carbon reduction and electrification, silicon (Si) has been recognised as critical by many governments.

High-purity quartz (HPQ) is the only naturally occurring and economically viable source for the production of silicon. Silicon is a critical mineral, and a key component in modern technologies such as semiconductors and photovoltaic cells. Critical minerals support the move towards a greater reliance on electrification, renewable energy sources and economic security. The global transition to net zero carbon emissions means there is a growing need for new discoveries of HPQ to supply the silicon production chain. HPQ deposits are identified in a multitude of geological settings, including pegmatites, hydrothermal veins, sedimentary accumulations and quartzite; however, deposits of sufficient volume and quality are rare.¹

- Quartz is a mineral form of silicon dioxide (SiO₂) typically containing contaminating elements. It is the ability to remove these contaminants via processing that determines HPQ potential.
- Sibelco and The Quartz Corp produce 70-90% of the worlds HPQ from Spruce Pine in North Carolina, where the quartz is naturally very low in contaminants.
- Developing additional sources of HPQ is critical to a stable supply chain.

1. Excerpt from: “A review of high-purity quartz for silicon production in Australia” : <https://www.tandfonline.com/doi/full/10.1080/08120099.2024.2362296>

Appendix B: High Purity Quartz A Critical Source Of Silicon

- As silica content increases so does the value of the refined silica product.

Relative Prices of Silicon Products as Purity Increases		
Product	Purity (Si %)	Price (\$AUD/t)
Silicon Metal	≥98.5	\$ 405
Recharging Polysilicon	≥99.9999	\$ 7,000
PV Polysilicon	≥99.9999999	\$ 24,225
Electronic-grade Polycrystalline Silicon	>99.999999999	\$ 41,220
Prices sourced 1/10/2024 from https://www.metal.com/price/New%20Energy/Solar . Silicon Metal price sourced from maxtonco.com		

- The ability to refine a particular deposit is dependent on the type and location of contaminants within the quartz and other physical properties meaning each potential HPQ ore needs to be tested to determine ideal process pathway and the achievable purity of the end product.
- Refining processes are often tailored to specific ores.
