

December 2023 Quarterly Activities Report

Paradox Lithium Project, Utah, USA

- Anson completed the purchase of a lithium brine project from Legacy Lithium Corporation. in the Paradox Basin. The proposed strategic acquisition resulted in the Paradox Lithium Project becoming one contiguous mineralised block with an 8% increase in land area, to a total of 231.35 km².
- Major JORC 2012 Mineral Resource upgrade confirmed 1.504Mt of Lithium Carbonate Equivalent (LCE) and 7.61Mt of Bromine.

Green River Lithium Project, Utah, USA

- Anson plans to undertake a new JORC Mineral Resource drilling program at 3 priority targets at Green River. All proposals for the drilling program have been submitted.
- Anson proposed to locate the future lithium extraction and production facility at a recently acquired privately owned, industrial use land at the Green River. Engineering study has confirmed suitability of the proposed site for the construction of the proposed processing plant's foundations.

Hooley Well, Western Australia

- Anson has defined two large Rare Earth Element (REE) targets. The REE targets exhibit a similar radiometric signature to Krakatoa Resources' Tower Project with a major REE JORC Mineral Resource estimate and Desert Metals' high-grade REE prospects, both located in close proximity to the Hooley Well Project.
- Reconnaissance sampling program has identified widespread areas of pegmatites at the Mt Erong Prospect at the Hooley Well Project. The pegmatite outcrops have been identified over a significant area of approximately 5km x 2.5km.

Ajana Base and Precious Metals Project, Western Australia

- Anson has commenced drilling at two high-priority targets at its Ajana Project in the mid-west region of Western Australia – Ethel Maude and Surprise.
- Ethel Maude is the first drill target;
 - Drilling is focused on shallow high-grade zinc, lead and silver.
 - Target area is open to the north, east west and down dip.
- The Surprise historical workings are the second target;
 - Drilling will target a group of prospects in the east of the Project for high-grade lead, copper and silver.

Corporate

- Strong balance sheet with \$22.5 million cash on hand at the end of the quarter.

- Anson agreed an amended equity placement facility of \$30,000,000.

Diversified minerals development company Anson Resources Limited (ASX: ASN) (Anson, the Company) is pleased to provide the following update on its activities for the period ended 31 December 2023.

Anson has a portfolio of minerals projects in demand-driven commodities, led by its core asset, the Paradox Lithium Project in Utah, USA. It is focused on developing the project into a significant lithium producing operation.

Paradox Lithium Project, Utah

During the Quarter, the Company announced the completion of acquisition of the Green Energy Lithium Project from Legacy Lithium Corporation. The Green Energy Project is strategically located immediately adjacent to the Paradox Lithium Project, and increases the project area by 8% to a total of 231.35 km². It hosts 18 historic oil and gas wells – three of which have recorded lithium values – which has enabled Anson to deliver the Paradox Lithium Project's Mineral Resources upgrade without the need for further drilling (ASX announcement 16 October 2023).

The new, upgraded JORC Mineral Resource is;

- **1,504,237 tonnes of lithium carbonate equivalent (LCE) and 7,608,700 tonnes of bromine, including,**
 - **Indicated Resource of 366,737 tonnes of LCE and 1,910,000 tonnes of bromine; and**
 - **Inferred Resource of 1,137,500 tonnes of LCE and 5,698,700 tonnes of bromine**

A summary of the JORC Mineral Resource Estimate is presented in Table 1. Significant amounts of other minerals including Bromine (Br₂), Boron (Boric Acid, H₃BO₃) and Iodine (I₂) have also been estimated. A breakdown of the resources by aquifer is shown in Table 2. The Resource does not take into account potential replenishment of the brine zones.

The new, upgraded Mineral Resource represents a:

- **45% increase on the previously reported Lithium Mineral Resource*,**
- **44% increase on the previously reported Bromine Mineral Resource*.**

**The Previous Mineral Resource was published on 2 November 2022.*

Subsequent to the Quarter, Anson announced the completion of the geotechnical engineering study at Paradox. This engineering study formed a key component of the due diligence process undertaken to confirm the suitability for the location of the proposed Direct Lithium extraction (DLE) processing plant at the Paradox Project.

The study has delivered a successful outcome, and has confirmed that the site is suitable for the construction of the foundations of the proposed processing plant. It recommended that prior to the laying of foundations, general site grading be carried out to provide proper support for foundations, exterior concrete flatwork and concrete slabs-on-grade.

Further Mineral Resource Expansion Potential

Anson is building a world-class JORC Mineral Resource inventory at its lithium assets in the Paradox Basin in Utah. The Big Flat Unit 2 well, within the acquired Green Energy Project, see Figure 1 for the well location, has a known historical value of 173ppm lithium for the Clastic Zone 31 horizon. The re-entry of this well, if successful, would further increase the brine tonnage based on similar thicknesses which would support either an extension of the life of mine or a possible production increase (ASX announcement, 16 October 2023).

Figure 1: Plan shows the Mineral Resource classification for the Clastic Zone 31 horizon after resource upgrade.

Project Summary:

The Paradox Lithium Project consists of 2,642 placer claims, 87 that are subject to an earn-in agreement¹ and the remainder are 100% owned by Anson² in Utah, USA. In addition, three state Potash and Mineral leases and two state industrial leases are included in the Project area¹.

¹ Anson commenced with a 10% interest in these 87 claims which increased to 50% from the work done, and may be subject to finalisation under the terms of the agreement to earn-into the ULI Project

² 65 claims owned by Anson may be subject to area of interest provisions of the agreement to earn-into the ULI Project.

Green River Lithium Project

Anson has confirmed the location for its proposed processing plant site at its Green River Lithium Project, after the Company completed a detailed geotechnical engineering study over the project area, which delivered highly positive outcomes and helps reaffirm the Project's development potential (ASX announcement, 6 October 2023).

The confirmation of the processing plant site being suitable for the construction of the proposed processing plant's foundations represents a key milestone in Anson's development plans for the Green River Project. The engineering study was undertaken by independent engineering and geological consultants as part of Anson's due diligence process for its recently completed acquisition of an industrial-use land package at Green River.

Anson plans for a new JORC Mineral Resource drilling program at priority targets at the Green River Project (ASX announcement, 2 October 2023) (Figure 2).

Figure 2: Plan showing the proposed drillhole locations on the privately owned Green River property.

This drilling represents the second phase of Anson's JORC Mineral Resource definition strategy at Green River, and is designed to add additional Resources to those planned to be defined from the Company's proposed re-entry drilling program at existing oil and gas wells (ASX announcements, 13 March and 26 September 2023).

The new Mineral Resource drilling program aims to drill to a total vertical depth (TVD) of 10,800 feet to sample the Mississippian units and Clastic Zones. It has been recorded that both the Clastic Zones and the Mississippian units contain supersaturated brines, but no assaying for lithium has been carried out to date.

Anson has submitted three Notice of Intent's (NOI) to the Utah Division of Oil, Gas and Mining (UDOGM), Minerals Division covering the three drill targets for the planned new drilling program. In addition, it has also submitted a requisite Application Permit to Drill (APD) to UDOGM due to the planned depths of the wells - drilling is planned to a total vertical depth of approximately 3,292 meters (10,800 feet) to sample both the Mississippian units and Clastic Zones.

Subsequent to the Quarter, Anson received a Conditional Use Permit (CUP) from the Green River City Planning & Zoning Commission for exploration drilling on the area of its proposed

Utah Sample Demonstration Plant (USDP) at Green River. The grant of the CUP follows the Green River City Council's approval of the re-zoning of Anson's privately-owned ground at the Green River Project for exploration drilling and mineral processing.

The CUP will allow Anson to conduct exploration drilling adjacent to the proposed USDP, with the aim of utilising the brine from the drilled well directly into the lithium extraction process at the Demonstration Plant to replicate as closely as possible the operating conditions of the Company's proposed future full-scale production plant.

Yellow Cat Vanadium / Uranium Project

The Yellow Cat project is located 30 km north of Moab, in the Thompson District, Grand County Utah. There are two separate areas: the Yellow Cat and the Yellow Cat West claims.

The Yellow Cat project is considered prospective for the development of both uranium and vanadium due to the high historic grade mineralisation present on the claims. The project is located in a region that is increasingly sought-after by companies exploring for uranium.

UV1 Minerals LLC, a wholly owned Utah based subsidiary of Anson, has not yet completed surveys for the further development of the Yellow Cat project due to the current focus of the Company on the Paradox Lithium Project, the Green River Lithium Project in Utah and the Ajana Project base metals and the Hooley Well Cobalt-Nickel Laterite Project in Western Australia. In addition, the planned work program has been delayed by low temperatures and snow coverage of the area to be surveyed.

Figure 3: Plan showing the proposed exploration program within the U and V mineralized trend at the Yellow Cat Project.

The Ajana Project

The Ajana Project is located in Northampton, Western Australia, a proven and established mining province for zinc, lead and silver. The Project is adjacent to the North West Coastal Highway and 130km north of Geraldton. Historical exploration in the area has concentrated on the search for lead and zinc deposits. The prospective ground on the tenements E66/89 and E66/94 is dominated by the Northampton Metamorphic Complex.

The Ajana Project contains several historic copper, lead and silver producing mines that date back to 1850.

Anson's drilling will comprise two separate programs at priority targets: the high-grade Ethel Maude prospect and the Surprise historical workings (ASX Announcement 3 November 2023). Drilling is targeting highly prospective lead-zinc-copper-silver mineralised areas which have been defined from geological mapping programs carried out on targets that had previously been identified by VTEM geophysical survey and soil sampling programs (ASX Announcement 13 November 2017).

Anson had previously carried out heritage surveys over the areas to be drilled and completed a mapping and rock chip sampling program at the Surprise, Ethel Maude and Block 1 prospects (ASX Announcement 26 September 2020).

Within the area of the historic Ethel Maude Mine, the majority of the mineral deposits are situated between (and significantly, are not adjacent to) the dolerite dykes. In this area the dolerite dykes have been crosscut by north-west trending faults, which differs to most of the known lead deposits in the Ajana Project area.

It is considered that the cross-cutting faults may have contributed to the formation of larger, high-grade deposits, and provides a priority drill target in Anson's current phase of exploration.

Figure 4: Plan of the Ethel Maude Mine geology and the locations of the shafts.

The second drilling program will be undertaken in the Surprise area, on the eastern side of the Ajana Project area, and will target the Galena, Surprise, Galena and Two Boys prospects (Figure 5).

Figure 5: Plan showing the locations of the proposed drill targets in the Surprise area.

The Surprise, Surprise South and Galena prospects are located on a sinistral tear fault with a lateral displacement of 900 metres (striking at 340° and dipping 70° west in granulite). Mineralisation occurs on bends and in-echelon offshoots.

The two Boys prospect is on a parallel fault, 170 metres to the east, also in granulite country rock. An historic copper mine has been worked on a parallel shear 90 metres west of the Galena mine. There is much brecciation and alteration in the lodes and wall rocks. Primary minerals present in the lodes are galena, sphalerite, marcasite, chalcopryrite, barite and quartz.

Hooley Well Cobalt-Nickel Laterite Project

The Hooley Well Nickel-Cobalt Laterite Project is located 800km north of Perth and 300km north-east of Geraldton in Western Australia consisting of three tenements E9/2218, E9/2219 and E9/2462. Tenements E9/2218 and E9/2219 contain historical shallow drilling which has intersected nickel and cobalt laterites. There are also possible primary nickel sulphides (identified by IP response) at depth.

During the quarter, Anson announce the discovery of widespread pegmatites at its Hooley Well Project, in the mid-west region of Western Australia.

The pegmatites have been identified at the Mt Erong Prospect (E09/2462) during a recent reconnaissance sampling program conducted by Anson at the Hooley Well Project. The Project is located approximately 700km northeast of Perth, in the north-western extent of the highly prospective Yilgarn Craton.

Anson's geological field team identified large expanses of outcropping pegmatites at the Mt Erong Prospect (Figure 6). The pegmatite outcrops have been identified over a significant area, measuring approximately 12.5km² (5km x 2.5km).

This initial discovery is highly encouraging, but it is noted that the presence of pegmatites does not confirm the presence of lithium (spodumene or other lithium minerals) or rare earth elements (REE), which can only be confirmed by assaying. This will be a key focus for Anson in its future exploration at the Project.

The Company intends to use the results of the early reconnaissance surveys to plan future exploration programs, and will also continue exploration of the remainder of the E09/2462 tenement and the wider project area, focusing on its multi-commodity potential.

Figure 6: Aerial image showing the locations where the pegmatite outcrops were identified.

Bull Nickel-Copper-PGE Project

The Bull Project is located only 35km from Perth abutting Chalice Mining Limited's (Chalice) (ASX: CHN) tenements and is 20km south-west along strike of Chalice's high-grade Julimar

Ni- Cu-PGE discovery. Anson is still awaiting the granting of ELA0/5619 tenement that abuts the Bull Project area to the south.

Negotiations continued with the landowners in which drilling exploration programs are planned with staff confirming the location of the drill holes that would result in the least amount of disturbance possible. Priority drill targets were defined based on geophysical surveys and geological mapping. The stage 1 drilling program consists of 18 holes focusing on priority areas 1, 2 and 3, and will be drilled to a depth of 200m from west to east at a 60° angle to maximize potential intersection of the targeted anomalous ultramafic units, See Figure 7.

The magnetic image interpretation in Figure 7 shows the distinct internal character of the magnetic anomaly at The Bull. Rather than a homogenous ovoid-shaped magnetic anomaly, the anomaly appears to be comprised of a series of magnetic high lenses and potential structural offsets.

Corporate

Annual General Meeting

The 2023 Annual General Meeting was held on 3 November 2023. All resolutions were carried by poll.

Change of Auditor

During the quarter, the Company received consent from the Australian Securities and Investments Commission for the resignation of Stantons International Audit And Consulting Pty Ltd (Stantons) as auditor of the Company. Stantons was replaced by Ernst & Young as auditor following shareholder approval at the AGM.

Extension of Long State Placement Facility

During the quarter, the Company agreed an amendment to its equity placement facility with Long State Investment (LSI). The amended terms provide the Company with access to a facility totaling \$30,000,000 until 31 December 2026. The Company can draw down under this facility \$750,000 at a time, at Anson's discretion, and up to \$4,500,000 with LSI's written consent. The Company has issued 7,500,000 options exercisable at \$0.225 expiring 31 December 2026 to LSI as part consideration of the extension.

Expenditure during the quarter:

The Appendix 5B details the expenditure during the quarter. Administration and corporate costs were \$1.3 million. In accordance with Listing Rule 5.3.1, the Company reports that there was \$5.5 million exploration and evaluation costs which were predominantly expended on the Paradox Project. Payments to related parties at section 6.1 of the Appendix 5B of \$626 thousand relate to director fees, salaries, superannuation and consulting fees.

Forward Looking Statements: Statements regarding plans with respect to Anson's mineral projects are forward looking statements. There can be no assurance that Anson's plans for development of its projects will proceed as expected and there can be no assurance that Anson will be able to confirm the presence of mineral deposits, that mineralisation may prove to be economic or that a project will be developed.

Competent Person's Statement 1: The information in this report that relates to exploration results; exploration target, Mineral Resources and geology is based on information compiled and/or reviewed by Mr Greg Knox, a member in good standing of the Australasian Institute of Mining and Metallurgy. Mr Knox is a geologist who has sufficient experience which is relevant to the style of mineralisation under consideration and to the activity being undertaken to qualify as a "Competent Person", as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves and consents to the inclusion in this report of the matters based on information in the form and context in which they appear. Mr Knox has reviewed and validated the metallurgical data and consents to the inclusion in this Announcement of this information in the form and context in which it appears. Mr Knox is a director of Anson Resources Limited and a consultant to Anson.

Competent Person's Statement 2: The information contained in this ASX release relating to Exploration Results and Mineral Resource Estimates has been prepared by Mr Richard Maddocks, MSc in Mineral Economics, BSc in Geology and Grad Dip in Applied Finance. Mr Maddocks is a Fellow of the Australasian Institute of Mining and Metallurgy (111714) with over 30 years of experience. Mr Maddocks has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a competent person as defined in the 2012 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves.

Mr Maddocks is an independent consultant to Anson Resources Ltd. Mr Maddocks consents to the inclusion in this announcement of this information in the form and context in which it appears. The information in this announcement is an accurate representation of the available data from exploration at the Paradox Lithium Project.

Competent Persons Statement 3: The information in this announcement that relates to the Exploration Results on the Yellow Cat project is based on information compiled and fairly represented by Matthew Hartmann. Mr. Hartmann is a Principal Consultant with SRK Consulting (U.S.) Inc. with over 20 years of experience in mineral exploration and project evaluation. Mr. Hartmann is a Member of the Australasian Institute of Mining and Metallurgy (318271) and a Registered Member of the Society of Mining, Metallurgy and Exploration (4170350RM). Mr Hartmann has sufficient experience relevant to the style of mineralisation and type of deposit under consideration, and to the activity which has been undertaken in 2019 and 2020, to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of exploration results, Mineral Resources and Ore Reserves. Mr Hartmann provides his consent to the inclusion in this report of the matter based on this information in the form and context in which it appears.

Information is extracted from reports entitled 'Anson Obtains a Lithium Grade of 235ppm at Long Canyon No 2' created on 1 April 2019, 'Anson Estimates Exploration Target For Additional Zones' created on 12 June 2019, 'Anson Estimates Maiden JORC Mineral Resource' created on 17 June 2019, 'Anson Re- enters Skyline Well to Increase Br-Li Resource' created on 19 September 2019, 'Anson Confirms Li, Br for Additional Clastic Zones' created on 23 October 2019 and all are available to view on the ASX website under the ticker code ASN. Anson confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement and, in the case of estimates of Mineral Resources or Ore Reserves, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. Anson confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

- (i) Anson currently holds a 50% interest in 87 Placer Claims in Utah, USA (the ULI Project).

At the date of this Report, the holder of the remaining 50% interest had not completed the formalities to transfer the claims to the joint venture company (Paradox Lithium LLC) established for this purpose. Further, achievement of the milestones which increased Anson's interest to 50% may be subject to finalisation under the terms of the agreement to earn-into the ULI Project

These claims are referred to as ULI-13, ULI-14, ULI-14S, ULI-15, ULI15S, ULI16, ULI16S, ULI-30, ULI-31, ULI-32, ULI-33, ULI-34, ULI-35, ULI-36, ULI-37, ULI-38, ULI-39, ULI-40, ULI-41, ULI-42, ULI-43, ULI-54, ULI-55, ULI-56, ULI-57, ULI-58, ULI-59, ULI-60, ULI-60-E, ULI-61-E, ULI-62-E, ULI-63, ULI-64, ULI-64 N, ULI-65, ULI-65 W, ULI-66, ULI-67, ULI-68, ULI-69, ULI-70, ULI-71, ULI-77, ULI-78, ULI-79, ULI-80, ULI-81, ULI-81 W, ULI-82, ULI-83, ULI-84, ULI-85, ULI-86, ULI-87, ULI-88, ULI-89, ULI-90, ULI-91, ULI-92, ULI-93, ULI-93 E, ULI-94, ULI-95, ULI-96, ULI-97, ULI-97 E, ULI-98, ULI-98 N, ULI-99, ULI-100, ULI-101, ULI-102, ULI-102 N, ULI-103, ULI-104, ULI-105, ULI-105 N, ULI-106, ULI-107, ULI-107 N, ULI-108, ULI-109, ULI-110, ULI-111, ULI-112, ULI-113 and ULI-114.

- (ii) Anson currently holds a 100% interest in 155 Placer Claims in Utah, USA. Under the terms of an earn-in agreement for the ULI Project, these placer claims may be subject to area of interest provisions of the agreement to earn-into the ULI Project.
