G50 Corp To Commence Trading on OTCQB (GFTYF), Aligning with U.S. Push for Critical Mineral Independence

- G50 Corp Limited (ASX: G50) to commence trading on the OTCQB Market in response to growing North American investor interest
- The listing provides U.S. investors direct access to **G50's Golconda Project**
- Approximately **9% of G50's shareholder base** is currently held by U.S. domiciled investors
- OTCQB trading enhances visibility and unlocks deeper capital market access for G50 in proximity to U.S. end-user markets
- The Golconda Project is well positioned to support U.S. efforts in securing domestic supply of **strategic and precious minerals** amid rising demand from AI, EVs, and defence sectors

G50 Corp Limited (ASX: G50) ("G50 Corp" or "the Company") is pleased to announce that it has been accepted to commence trading on the OTCQB Market in the United States, responding to strong interest from U.S. investors seeking exposure to domestic strategic and precious metals projects.

The Company's decision to trade on the OTCQB comes at a pivotal time. With growing energy demands from AI data centres, electric vehicles, and defence applications, the U.S. government has intensified its focus on securing reliable domestic sources of raw materials including gallium. Executive Orders, including January 2025's "Unleashing American Energy," have further aligned private and public interests toward strengthening America's critical minerals supply chain. G50 Corp aims to become a leading contributor to the U.S. mine-to-market solution over the coming decade, ensuring a stable supply of strategic and precious metals.

Arizona, where the Company's flagship Golconda Project is located, continues to attract major investment. The state has seen approximately US$124 billion in private capital and US$30.8 billion in federal funding across clean energy, infrastructure, and manufacturing. Global giants such as TSMC plan investments of up to US$165 billion, including the development of a high-tech facility in Arizona[1].

Interest in upstream mineral projects is also surging, with notable activity from BHP and Rio Tinto at their Resolution copper mine and new investments into New World Resources. G50's Golconda Project comprises both patented and unpatented claims and is ideally positioned near existing mining infrastructure and logistics hubs to meet the country's growing demand for domestic mineral resources.

G50's Managing Director, Mark Wallace, commented:

"Trading on the OTCQB Market is a strategic milestone in G50 Corp's journey to become a leading U.S. developer of gallium and precious metals through our Golconda Project in Arizona. We believe G50 to be the only publicly traded gallium project in the US and offers investors unique exposure to a critical component in the mine-to-market supply chain. With a growing base of U.S. institutional interest and an already strong U.S. shareholder presence, access to the OTCQB platform enhances our ability to engage a broader investor audience and advance our position within domestic supply networks."

This announcement has been approved for release by the Board of G50.
