

Building Australian Magnet Rare-Earth Supply

Scale • Simplicity • Speed

Jupiter REE Project is Australia's largest clay-hosted MREO resource. Based in Western Australia, with promising beneficiation testwork results, advancing through metallurgical studies.

This Presentation (**Presentation**) has been prepared by Critica Limited (**CRI** or the **Company**) and is authorised by the Board of CRI. The information contained in this Presentation is a professional opinion only. Certain information in this Presentation has been derived from third parties and though CRI has no reason to believe that it is not accurate, reliable or complete, it has not been independently audited or verified by CRI.

This Presentation contains general and background information about CRI's current activities as at the date of this Presentation and should not be considered to be comprehensive or to comprise of all the information that an investor should consider when making an investment decision. CRI is not responsible for providing updated information and assumes no responsibility to do so. Recipients should conduct their own investigations and perform their own analysis of the information, statements and opinions contained and this Presentation should be read in conjunction with CRI's other periodic and continuous disclosure announcements lodged with the ASX.

This Presentation is for information purposes only. Neither this nor the information contained in it constitutes an offer, invitation, solicitation or recommendation in relation to the purchase or sale of CRI shares in any jurisdiction. This Presentation is not investment advice or a recommendation to acquire CRI securities and has been prepared without taking into account the recipient's investment objectives, financial circumstances or particular needs. Recipients should seek professional advice before deciding if an investment is appropriate.

All securities transactions involve risks, which include (among others) the risk of adverse or unanticipated market, financial or political developments.

To the fullest extent permitted by law, CRI, its officers, employees, related bodies corporate, agents and advisers expressly disclaim, to the maximum extent permitted by law, all liabilities (however caused, including negligence) in respect of, make no representations regarding, and take no responsibility for, any part of this Presentation and make no representation or warranty as to the currency, accuracy, reliability or completeness of any information, statements, opinions, conclusions or representations contained in this Presentation. No responsibility for any errors or omissions from this arising out of negligence or otherwise is accepted.

Any forward-looking statements and forward-looking information included in this Presentation involve subjective judgment and analysis and are subject to uncertainties, risks and contingencies, many of which are outside the control of, and may be unknown to, CRI. In particular, they speak only as of the date of this Presentation, they assume the success of CRI's strategies, and they are subject to significant regulatory, business, competitive and economic uncertainties and risks. Actual future events may vary materially from the forward-looking statements and forward-looking information and the assumptions on which they are based. Recipients of this Presentation are cautioned to not place undue reliance on such forward-looking statements and forward-looking information.

Authorised by the Board of Critica Limited

Basis of Preparation

CRI has not completed a Scoping or Feasibility Study. References to development pathways are aspirational and do not imply economic viability. Inferred Mineral Resources are insufficient to support Ore Reserves and cannot underpin production targets or forecasts. Metallurgical results are preliminary testwork on selected samples; applicability across the deposit and at scale remains to be demonstrated. Future studies, permits and funding (including equity) may be required before any development decision.

Competent Persons Statement

The information in this report that relates to exploration results including geology interpretation, data preparation and data quality is based on work compiled by Dr. Stuart Owen who is a Member of the Australian Institute of Geoscientists. Dr. Owen is a permanent employee of Critica Limited and has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC code). Dr. Owen consents to the inclusion in the report of the matters based on his information in the form and context in which they appear.

This Presentation refers to Critica's mineral resource estimate at the Jupiter Project. The information in this Presentation that relates to that mineral resource estimate has been extracted from Critica's previous ASX announcement entitled Jupiter Maiden Resource – Australia's Largest Clay Hosted which Critica announced to the ASX on 11 February 2025 and 13 August 2025 Jupiter Confirmed as Australia's Largest MREO Clay Resource. A copy of the announcements are available at www.asx.com.au (ASXCRI) or at www.critica.limited.

Critica confirms that it is not aware of any new information or data that materially affects the information included in that announcement and, in relation to the estimate of the mineral resource, confirms that all material assumptions and technical parameters underpinning the estimate in that announcement continue to apply and have not materially changed. The Competent Person in relation to the mineral resource estimate in that announcement was Rodney Brown. Critica confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from that announcement.

The Information in this presentation relates to previous exploration results extracted from the following ASX announcements:

- 29 September 2025 – Consistent Bulk Sample Results Strengthen Jupiter Pathway
- 1 September 2025 - Critica to produce high-grade REE concentrate at pilot plant
- 26 August 2025 - ANSTO & Minutech engaged to produce first MREC from Jupiter
- 13 August 2025 – Jupiter Confirmed as Australia's Largest MREO Clay Resource
- 16 July 2025 – Critica Advances Jupiter – Outstanding Magnet and HREO Grades
- 28 May 2025 – Critica Commences Bulk Metallurgical Testwork
- 5 May 2025 – Drilling Targets Restricted Heavy REE at Satellite Prospects
- 11 February 2025 – Jupiter Maiden Resource – Australia' Largest Clay Hosted
- 23 January 2025 – Frist Pass Metallurgical Testwork Delivers 830% REE Upgrade

The Problem: A Critical Supply Bottleneck

Demand and Supply

Demand is Surging, Structural and Strategic

REE demand forecast to rise ~6× by 2050, with magnet REEs growing ~5× by 2040¹

Global Supply Chain Highly Concentrated²

Rare earth production and processing remain regionally concentrated, creating vulnerability for diversified, resilient supply chains

OEMs Desperate for Traceable, ESG-Compliant Supply

Policy and customer requirements drive demand for transparent, low-carbon, responsibly sourced materials; mine-to-magnet traceability is essential³

No New Supply: Build Times & Permitting Create Bottlenecks

Average 6–18 years from discovery-to-production - structural lag constrains near-term supply⁴

What This Means for Critica

Jupiter's scale, metallurgy and WA location align perfectly with global demand for secure, responsible REE supply

Policy & Funding Tailwinds

U.S, EU, Japan, and Korea prioritising magnet REE supply with direct funding and stockpiling programs

OEMs contracting earlier in the value chain to secure magnet metal supply for EV and renewable energy applications

EU targets by 2030: 10% extraction, 40% processing, 25% recycling, and ≤65% from any single third country

US\$110/kg NdPr floor price set by U.S. DoD for domestic producers⁷

Magnet REEs power technologies such as:

EVs

Wind
Turbines

Robotics

AI
Processors

Defense
Platforms

Sources: ¹ Barclays Research, May 2025; ² IEA; US Geological Survey; ³ U.S. Government IRS rules on Evs and Restriction on NdFeB mine-to-magnet chain; EU Batteries Regulations; ⁴ IEA; S&P Global; ⁵ Reuters (quoting Adamas Intelligence); ⁶ Global X ETFs, Wood Mackenzie, Politico, United States Geological Survey (via Livewire Markets); ⁷ In July 2025, the U.S. Department of Defence (DoD) has agreed to a US\$110/kg price floor for neodymium-praseodymium (NdPr), the key oxide used in high-strength permanent magnets.

The Solution

Critica's Jupiter Project

01 Scale

Australia's largest and highest-grade clay-hosted resource. Magnet REEs (Nd, Pr, Dy, Tb) making up a significant proportion of the reported grade distribution¹

02 Simplicity

Preliminary testwork on selected samples indicates ~95% mass rejection and >8× grade uplift prior to leach, with low U/Th in a Tier-1 WA location

03 Speed

Current programs with ANSTO, Minutech and GAVAQ are now live, with results intended to inform pilot-scale work and future studies

1. Refer to Jupiter resource announcements dated 11 Feb and 13 Aug 2025

Jupiter: Scale

Quality, Continuity & Growth Potential

October 2025

ASX: CRI

Critica.limited

Mineralisation: Near surface, homogeneous across 40km² – constant & predictable

Clean basket: Low U&Th – potential ESG benefits

Growth potential: Jupiter <3% of Critica's Brothers Project – flexibility & grow

The Jupiter resource features consistent mineralisation across the deposit, with opportunities for expansion through targeted exploration

Jupiter: Simplicity

Why Clay-Hosted Matters

01 Low strip ratio, potentially simple mining

Jupiter is located on pastoral leases with flat terrain and sparse vegetation. Engagement underway for heritage surveys and approvals

02 Beneficiate upfront, low footprint

Clay-hosted advantage: upfront beneficiation delivers major mass reduction and grade uplift before hydrometallurgy

03 Metallurgical responsiveness, the key

Not all clays are equal. Large-scale pilot testing across all Jupiter ore types confirms ~95% mass rejection and 8–10× upgrade to a 15,000–20,000 ppm TREO concentrate — validating the beneficiation-first pathway

Image: Jupiter Project. Jupiter's clay-hosted REE mineralisation potential to offer significant processing advantages over hard rock deposits. The unique clay chemistry and structure enable physical separation and concentration using conventional, low-energy processes.

Jupiter: Simplicity

Jupiter's Beneficiation Unlocks Simplicity

The combination of **~95% mass rejection and 6–10× upgrade** — validated on a 400 kg bulk sample across multiple Jupiter ore types — demonstrates a simple, scalable beneficiation pathway with enduring advantages such as:

- A smaller leach circuit
- Reduced reagent, water and energy use
- Low U&Th levels provide potential favourable characteristic for handling and processing

Preliminary large-scale testwork (400 kg bulk sample) indicates ~95% mass rejection and 6–10× upgrade prior to leach across multiple Jupiter ore types. Applicability across the broader deposit and at commercial scale remains to be demonstrated. These are aspirational statements and not intended to be forecasts.

Mixed Rare Earth Product (MREP) - An intermediate product in rare earth processing, typically containing 30–50% TREO. MREP can be produced as a carbonate or oxide and is the preferred feedstock for downstream separation facilities.

Jupiter: Tier-1 Western Australia Infrastructure Advantage

Jupiter is located within trucking distance of services, power and port infrastructure

1 Infrastructure rich
Road > rail > port pathways; short haul to utilities

2 Proven mining jurisdiction
Transparent approvals, Skilled workforce and OEM/contractor base

Jupiter: Speed

From Validation to Value - Near-Term Value Catalysts

Structured Pathway to Development

01

Geological Definition – Resource Optimisation

- Infill drilling and block modelling of magnet-REE zones (Nd, Pr, Dy, Tb)
- Upgrading Inferred to Indicated for Scoping inputs

02

GAVAQ Beneficiation – Pilot Scale Validation

- 400 kg trials confirm ~95 % mass rejection and 6–10× upgrade
- 3,000 kg closed-circuit pilot underway to refine recoveries

03

MREP* Hydrometallurgy – ANSTO & Minutech

- Parallel hydromet tests defining leach pathway and MREP chemistry
- Validates recoveries and product quality across ore types

04

Pilot Design Integration – Process Definition

- Combines beneficiation and hydromet results into full process model
- Defines MREP specification and supports offtake readiness

05

Scoping Study – Integration & Forward Planning

- Consolidates technical data and process parameters
- Establishes economics and pathway to Pre-Feasibility

Leadership Team

Proven Track Record in Critical Minerals Project Delivery

Critica is not just a resource story — delivered by people who’ve done it before

- Proven track record in critical minerals project delivery
- Experience from exploration through to production
- Board and management aligned on disciplined execution
- Deep WA industry, OEM and investor relationships

October 2025

ASX: CRI

Critica.limited

Management

Jacob Deysel BSc Mining, MBA
CEO – Mining engineer with 25+ years in global critical mineral leadership — from Rio Tinto to Rare Earths and UEC — expert at scaling projects into production.

Jamie Byrde BComm, CA
CFO – Finance professional with 20+ years in ASX-capable CFO and company secretary roles, specialising in governance, compliance and capital discipline.

Dr. Stuart Owen BSc (Geology), PhD (Geology)
Exploration Manager – PhD geologist with 25+ years of exploration success across four continents; led discovery of Paulsens gold and the Jupiter REE deposit.

Dr. Natalee Bonnici BSc Hon (Geology), PhD (Geometallurgy)
Senior Exploration Geologist – 15+ years as a Geologist and PhD geometallurgist experienced in linking mineralogy to metallurgical behaviours; part of the discovery of the Triumph VHMS deposit, Leonora WA; developed and delivered resources at Northern Star Kalgoorlie.

Dr. Thi Thu Hien Dinh BSc (Mineral Processing), PhD (Metallurgy)
Senior Metallurgist – PhD metallurgist with 23+ years in rare earths and battery metals; led processing teams across REE, lithium, and nickel projects.

Tim Lindley MCom, BA, GAICD, FGIA
Non-Executive Chairman – Seasoned ASX Chair and NED with 25 years in global investment banking (Morgan Stanley, Barclays, Deutsche and UBS), adept in equity raising, project finance and growth M&A.

Nick Cernotta B.Eng (Mining)
Non-Executive Director – Mining engineer with 40 years of global multi-commodity, corporate and operational leadership experience (Fortescue, Barrick, MacMahon). Independent NED and Chair roles across ASX-listed companies.

Board

Investment Highlights

October 2025

ASX: CRI

Critica.limited

01 Scale

- Australia's largest clay-hosted magnet REE resource (~640 Mt @ ~490 ppm MREO)
- ~680,000 t contained MREO (including Nd, Pr, Dy, Tb)
- District-scale growth — Jupiter is one of six discoveries across Brothers (1,353 km²)

02 Simplicity

- Clay-hosted advantage — beneficiate upfront before hydrometallurgy
- Exceptional responsiveness — ~95% mass rejection & >800% upgrade
- Low U/Th basket — cleaner, safer, easier to permit, smaller footprint

03 Speed

- Active programs now — ANSTO, Minutech, GAVAQ pilot
- Clear catalyst path — MREP samples, Scoping Study inputs
- Disciplined funding — milestone-driven

Near-term value catalysts:

Resource > MREP > Pilot Upscale > Scoping Study > Commercial Discussions

Our advantage is simple: scale that overwhelms, metallurgical potential and a pathway that accelerates.

Critica Limited (ASX:CRI)

Strategic Optionality

October 2025

ASX: CRI

Critica.limited

Mt Lindsay Tin Tungsten Project¹

- Mt Lindsay is one of the largest undeveloped tin-tungsten deposits globally
- Bankable Feasibility Study completed
- **Contained metal:**
 - 81,000t of Tin &
 - 3,200,000 mtu Tungsten Trioxide (WO₃) ~32,000t
- **Tin and tungsten prices are accelerating**, driven by tightening global supply, renewed demand from electronics, semiconductors and defence sectors

1. Combined resource – Measured, Indicated & Inferred - Refer to ASX release 17 October 2012.

ESG Advantage

Built-In, Not Bolted-On

Critica's Jupiter project is being advanced with a focus on ESG principles, leveraging geological and processing characteristics that have the potential to reduce environmental impact and align with global decarbonization objectives

95%

Mass rejection
before leaching

October 2025

ASX: CRI

Critica.limited

Clean Geology

Preliminary testwork indicates exceptionally low uranium and thorium content, significantly below regulatory thresholds — a favourable characteristic for handling and export

Smaller Footprint

Pilot-scale beneficiation results from a 400 kg bulk sample show ~95% mass rejection across multiple ore types, meaning substantially less material requires downstream processing and storage compared to untreated feed

Resource Efficiency

Flowsheet design under evaluation suggests lower water and energy intensity than direct-leach approaches, reflecting potential processing efficiencies

Heritage Assessment

Standard heritage assessment undertaken – low risk area

Appendix A: Glossary

Key Terms and Definitions

1

TREO/MREO

Total Rare Earth Oxides / Magnet Rare Earth Oxides - MREO refers specifically to those rare earth elements used in permanent magnets (primarily Nd, Pr, Dy, Tb)

2

NdPr

Neodymium and Praseodymium - The two most common rare earth elements used in permanent magnets, typically accounting for ~90% of magnet composition

3

Dy, Tb

Dysprosium and Terbium - Heavy rare earth elements added to magnets to improve performance at high temperatures, critical for EV traction motors and wind turbines

4

MREP

Mixed Rare Earth Product - An intermediate product in rare earth processing, typically containing 30–50% TREO. MREP can be produced as a carbonate or oxide and is the preferred feedstock for downstream separation facilities
