Sipa Resources – Live Investor & Shareholder Webinar

Sipa Resources Limited (ASX: SRI) ("Sipa" or "the Company") is pleased to advise that, following the release of its December Quarterly Report, Managing Director Andrew Muir will host a live investor webinar for shareholders, investors and other interest parties.

The webinar will cover the acquisition of advanced gold projects in South Australia and Western Australia announced just prior to Christmas, as well as recent drilling and exploration activities at the Paterson North Gold-Copper Project and Skeleton Rocks Nickel Project.

The webinar will commence at **11.30am (AWST) / 2.30pm (AEDT) on Thursday, 16 January 2025**.

Investors can register to join the webinar via the following link:

About Sipa

Sipa Resources Limited (ASX: SRI) is an Australian-based exploration company focused on the discovery of precious, base and specialty metal deposits, primarily in Western Australia.

- Sipa has recently entered into agreements to acquire prospective gold exploration tenements in the Gawler Craton of South Australia, along strike from the Tunkillia gold deposit, and in the Goldfields of WA
- The Paterson North Project is targeting intrusion-related copper-gold mineralisation concealed by more recent cover sediments and is located to the northeast of Rio Tinto's Winu copper-gold discovery.
- The Skeleton Rocks Project covers outcropping and buried greenstone units, prospective for gold, lithium and nickel-copper-platinum group element (Ni-Cu-PGE) deposits, with limited previous drilling completed.
- The Barbwire Terrace base metal (lead-zinc) project, where exploration to date has achieved 'proof of concept' status, which involved an innovative joint venture with energy company, Buru Energy Limited.
- At Wolfe Basin, extensive sedex-style base metal (copper-lead-zinc) anomalism and gossans provide targets for drill testing along a >80km long prospective horizon.
- The Warralong Project is prospective for intrusion-related gold and lithium-tin-tantalum mineralisation in the north Pilbara region, in an analogous, parallel structural setting to recent discoveries such as Hemi.
