

Wednesday 18 October 2023

QUARTERLY ACTIVITIES REPORT

For the period ending 30 September 2023

GOLCONDA PROJECT, ARIZONA

- Significant domestic USA gallium discovery made at Golconda Project, Arizona (reported July 27, 2023) with **gallium mineralisation** in 11 of 14 holes including:
 - **109m at 40.5 g/t gallium from 129m in hole GDD02**
 - **241m at 20 g/t gallium from surface in hole GRC01**
 - **308m at 28.6 g/t gallium from surface in hole GRC02**
 - **271m at 23.8 g/t gallium from surface in hole GRC05 including 70m at 34.2g/t gallium from 93m**
- Gallium occurs within a broad zone of hydrothermal alteration, veining and brecciation at Golconda, which also hosts high-grade Zn-Pb mineralisation with gold and silver. More specifically, in the wide-spaced exploration holes drilled to date, gallium broadly correlates with zinc (in unoxidized rock) and closely with barium (likely baryte veins).
- **Higher grades of gallium and indium** are expected to be found with the **high-grade Zn-Pb lodes** that Gold 50 has yet to target with drilling.
- **Golconda has matured from brownfield exploration to new discovery** with a completed **Phase 1 drill program** very quickly. We are **planning for Phase 2 drilling** to expand on the high-grade gold discovery and our significant gallium success.

WHITE CAPS PROJECT, NEVADA

- **Comprehensive mapping completed** with rock sampling and general prospecting across the 10 km² of patented and unpatented claims concluded in the quarter.
- **216 rock samples** were taken during the mapping program to inform a fuller understanding of the **district scale opportunity at White Caps**. Historical surface sampling by G50 was restricted to the Patented claims only (20% of Project area).
- Sample results due in coming weeks.
- **White Caps has quickly become a drill-ready brownfield exploration project** in the short 10 months of ownership. Final stages of planning for the maiden drilling program.

CORPORATE

- The company's AGM was held on October 12th 2023.
- The well-attended meeting saw strong support with all resolutions put forward being carried.

Gold 50's Managing Director, Mark Wallace, commented:

"We are just beginning to test our large Golconda Project area which has very limited historical drilling. While our core value proposition is exploring for precious metals at Golconda, it is exciting to see the polymetallic nature of the project offer Gold 50 multiple opportunities to extract value for all shareholders. The strong and wide gallium assays from surface confirm and justify our systematic approach and commitment to Golconda.

Gallium is the lifeblood of the modern world with daily applications including Lidar technology for autonomous vehicles, Data centres, Aerospace and defence, consumers electronics, high end semiconductors and medtech for cancer diagnostics.

The significant gallium discovery of both intercepts, grade, and continuity places G50 in a unique position as a domestic source of gallium for the increasing needs of the US industrial and defence complex. Golconda has matured into an exploration success for Gold 50 and we are currently planning a Phase 2 drilling campaign.

Our White Caps Project in Nevada includes numerous patented claims where exploration can be progressed relatively quickly. Our initial soil sampling program has exceeded our expectations by confirming that the project is highly prospective for Carlin-style gold mineralisation.

In the first 10 months of ownership, we have completed soil and rock ship sampling, geophysics and comprehensive mapping. White Caps has quickly become a drill-ready brownfields exploration project and we look forward to our maiden drilling program."

GOLCONDA PROJECT, ARIZONA

Drilling by previous operators in the last 40 years was limited to shallow vertical holes intersecting +10m wide zones of +2g/t gold-silver mineralisation. The gold-silver and silver-lead-zinc veins within the Golconda Project are part of a large, zoned mineralised system related to the adjacent Mineral Park porphyry copper-molybdenum deposit.

Historical mining and drilling indicate that the gold grade increases with depth and that the "bottom" of the Golconda mineralised system has not yet been identified. For example, the deepest historic drill intercept, is 13g/t gold and 316g/t silver on the Golconda Vein near the 1,400-foot (425m) level of the Golconda Mine.

During the first half of 2023, G50 drilled 2 core holes and 12 RC holes at the Golconda Project. (Figure 1.) Further information on these drill holes and our new precious metals discovery is available in Gold 50's **"35m at 5.2 g/t Gold and 5.9 g/t Silver Including 9m at 19.5 g/t Gold and 17.8 g/t Silver at Golconda Project, Arizona"** announcement, dated 19 June 2023.

Gallium

Gold 50's flagship Golconda Project covers numerous well-developed precious and polymetallic mineralised veins and untested structures immediately southeast of, and directly related to, the Mineral Park porphyry copper-molybdenum deposit. Initial drilling targeted varied structural controls for mineralisation with multi-element assaying critical due to the nature of the polymetallic mineralised system.

Gallium occurs within a broad zone of hydrothermal alteration, veining and brecciation at Golconda, that also hosts high-grade Zn-Pb mineralisation together with gold and silver. More specifically, in the wide-spaced exploration holes drilled to date, gallium broadly correlates with zinc (in unoxidized rock) and closely with barium (likely baryte veins).

Based on this information and historic reports, higher grades of gallium and indium are expected to be found with the high-grade Zn-Pb lodes that Gold 50 has yet to target with drilling.

The significance of the gallium is two-fold:

- It provides a vector for base and precious metal mineralisation.
- It has economic implications as it can represent a significant credit in zinc concentrates.

The Golconda Mine ceased production in 1917 due to fire within the surface infrastructure, it was known to be the USA's highest-grade zinc producer.

Life Blood of the Modern World

Gallium arsenide (GaAs) is used to manufacture compound semiconductor wafers used in integrated circuits (ICs) and optoelectronic devices, which include laser diodes, light-emitting diodes (LEDs), photodetectors, and solar cells. Gallium nitride (GaN) is principally used to manufacture optoelectronic devices. About 77% of the gallium consumed in the United States was in GaAs, GaN, and gallium phosphide wafers.

Gallium metal, triethyl gallium, and trimethyl gallium, used in the epitaxial layering process to fabricate epiwafers for the production of ICs and LEDs, accounted for most of the remainder. Optoelectronic devices are used in aerospace applications, consumer goods, industrial equipment, medical equipment, and telecommunications equipment. Uses of ICs include defence applications, high-performance computers, and telecommunications equipment. (Source: U.S. Geological Survey, 2023, Mineral commodity summaries 2023: U.S. Geological Survey, 210 p.)

Gallium is on the U.S. Geological Survey's list of 50 mineral commodities critical to the U.S. economy and national security. **Gallium and germanium, along with their chemical compounds, were subject to China export controls starting August 1st, 2023.**

For more information, please visit our website: www.gold50.com/gallium/

Stockwork and sheeted quartz-sulphide veins. Quartz-sericite-pyrite alteration.*

GDD02 - Quartz-sericite-pyrite altered intrusive with quartz-sulphide veins.

Figure 1 - Plan showing location of core and RC collars of holes drilled by Gold 50

WHITE CAPS PROJECT, NEVADA

A core value proposition of the Gold 50 team is to explore in the shadows of headframes. During the September quarter, Gold 50 completed a detailed and comprehensive mapping program of the entire project area including rock sampling and general prospecting. This represents the first-ever detailed mapping of the project forms the core of Gold 50's first principal's approach to exploration. During mapping our team noted 156 separate points of historical mining and or prospecting pits in the area (Figure 2).

Figure 2 – Observed mining works and showings

In conjunction with the recent drone geophysics program, soil sampling and historical database of work completed at White Caps, the exploration team have a considerable amount of data to aid in target generation across the project area.

In early 2023, a strongly anomalous zone was defined over 2km along strike from the high-grade White Caps Mine on patented claims (private land). Arsenic, mercury, antimony, and thallium - the key pathfinder elements for Carlin-style gold deposits were all very anomalous.

Figure 4 below shows the location of the 276 soil samples and extensive zones with > 50ppb gold over approximately 2km of strike.

The seven target zones identified for follow-up are focussed on the most anomalous assays for the pathfinder elements.

Mineralisation at the White Caps Mine is concentrated along structural intersections within the Cambrian White Caps Limestone unit which averages 20m in thickness. Numerous cross-cutting north-south faults localise mineralisation within the host carbonates. **The soil sampling program and highly anomalous soil results extend well outside of the White Caps Limestone, increasing our understanding and targeting of the district potential of the White Caps Project.**

Further information on the soil sampling program is available in Gold 50's announcement "Carlin Type Geochemistry confirmed at White Caps", dated 20 February 2023.

Figure 3 – A and B – typical limestone outcrops, C - Brecciated chert layers

Figure 4 - Plan summarising outcomes from White Caps Soil Sampling

Exploration Targets already identified at White Caps are summarised in Table 1 below, **with the high-grade target ranging from 50,000 to 270,000 ounces at grades ranging from 7 to 25g/t gold.**¹

The Exploration Targets in Table 1 are presented as a range of tonnages and grades as the potential tonnage and grade are conceptual in nature. **There has been insufficient exploration to estimate a Mineral Resource and it is uncertain if further exploration will result in the estimation of a Mineral Resource.** Furthermore, the quantities and quality could materially change if a Mineral Resource is estimated in accordance with the JORC Code.

Table 1 - Exploration Targets for the White Caps Project as at 29 September 2022

Exploration Target	Depth Range (m)	Tonnes		Grade (g/t gold)		Metal (ounces of gold)	
		Min	Max	Min	Max	Min	Max
1	0-350	2,000,000	3,000,000	2.5	3	110,000	290,000
2	200-500	230,000	340,000	7	25	50,000	270,000

Exploration Target 1 is at open-pittable depths and is based primarily on historical drilling ranges from 110,000 to 290,000 ounces at grades ranging from 2.5 to 3g/t gold.

Exploration Target 2 is based primarily on unmined mineralisation in underground workings and ranges from 50,000 to 270,000 ounces at grades ranging from 7 to 25g/t gold.

Further information on these Exploration Targets is available in Gold 50's announcement "Acquisition of High-Grade White Caps Gold Project", dated 8 November 2022.

Low- and moderate-grade (<10g/t gold) targets may exist within the White Caps Mine in the vicinity of the historically mined high-grade (>10g/t gold) mineralisation. It is notable that the cross-cut on the lowest level of the White Caps Mine assayed **10m at 94g/t gold.**

Numerous historic mines and widespread gold occurrences are located along the Manhattan Fault, a major west-northwest structure. Within the WCP, mineralised carbonate rocks provide a **favourable host for gold mineralisation over 3km of strike length.**

The White Caps Limestone is within a 600m thick Cambrian sequence containing mineralised carbonate units that may also be favourable host rocks. There is good potential to define thicker zones of mineralisation around historic workings as the lower grade material (<10g/t gold) was largely ignored. **The prospective geology and historical mining indicate that the WCP is a district play, not just a high-grade underground target that remains open at depth.**

¹ Refer ASX release titled "Acquisition of High-Grade White Caps Gold Project" announced 9 November 2022.

PAYMENTS TO RELATED PARTIES

During the quarter \$87,000 was paid to the Managing Director as a salary and \$60,000 was paid as directors fees for Q1 FY2024.

FINANCIAL

As of 30 September 2023, the Company had \$1.073 million in cash.

A summary of the Company's expenditure for the quarter is provided below. Full details regarding the Company's cash movements during the quarter can be found in the attached Appendix 5B.

Exploration	73,742
Lease Payments & Permitting	307,519
Patented and Unpatented Claims	-
Other	3,259
Total Exploration and Evaluation Spend	384,520

There were no substantive mining production or development activities during the quarter.

This announcement has been approved for release by the Board of Gold 50.

Competent Persons Statement

The information in this report that relates to Exploration Results is based on information compiled by Bernard Rowe, a Competent Person who is a Member of the Australian Institute of Geoscientists. Bernard Rowe is a shareholder and Non-Executive Director of Gold 50 Limited. Mr Rowe has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Bernard Rowe consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

In respect of Exploration Targets referred to in this announcement and previously reported by the Company in accordance with JORC Code 2012, the Company confirms that it is not aware of any new information or data that materially affects the information included in the public report titled "Acquisition of High-Grade White Caps Gold Project", dated 9th November 2022 and released on ASX. Further information regarding the Exploration Targets can be found in that report. All material assumptions and technical parameters underpinning the estimates in the report continue to apply and have not materially changed.

Historical Exploration Data

Mineral exploration has been undertaken at the WCP by various prospectors and companies over time. There are no exploration reporting requirements in Nevada, and as a result there are no governmental records of the results of any previous exploration work.

The information on the WCP available to Gold 50 includes unpublished reports as well as information obtained from publicly available sources.

Inspection of the available reports covering the historical exploration provides limited to no information regarding quality control and quality assurance ("QA/QC") procedures that were followed. In addition, there is limited or no information in respect to such items as; sample type, sample size, where or how the samples were prepared for analysis, what analytical methods were utilised to determine the various elements, what if any standards, replicates, and blanks were inserted into the sample batches, etc.

APPENDIX 1 - ADDITIONAL ASX LISTING RULE DISCLOSURE

Pursuant to ASX Listing Rule 5.3.4, the Company provides its actual expenditure on the individual items in the two year "use of funds" statement in its IPO Prospectus since the date of its admission to ASX's Official List (being 6 August 2021) against the estimated expenditure on those items.

	Estimated Expenditure (2 years)	Expenditure Post Admission
Exploration - Total	6,271,000	4,959,221
Project Payments & claim fees	1,008,000	1,821,787
General administration and working capital	3,052,470	2,883,999
Estimated expenses of the offer*	911,428	638,904
Total	11,242,898	10,303,911

*Expenses have been incurred prior to ASX admission and were fully paid within FY2022

APPENDIX 2 - SCHEDULE OF TENEMENTS

ASX Listing Rule 5.3.3

State	Project	Tenement ID	Tenement Name	Area ¹ (acres)	Area ¹ (km ²)	Interest
Arizona	Golconda	AZ105252617 to AZ105252637	CIR claims (21)	433.9	1.8	100%

ABOUT GOLD 50

Gold 50 is an exploration company focussed on the South West of the United States of America. Gold 50 currently operates in Arizona at its Golconda Project and in Nevada at its White Caps, project.

5.4	Other (provide details)		
5.5	Cash and cash equivalents at end of quarter (should equal item 4.6 above)	1,073	688

6.	Payments to related parties of the entity and their associates	Current quarter \$A'000
6.1	Aggregate amount of payments to related parties and their associates included in item 1	147
6.2	Aggregate amount of payments to related parties and their associates included in item 2	-
<i>Note: if any amounts are shown in items 6.1 or 6.2, your quarterly activity report must include a description of, and an explanation for, such payments.</i>		

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

7. Financing facilities <i>Note: the term "facility" includes all forms of financing arrangements available to the entity. Add notes as necessary for an understanding of the sources of finance available to the entity.</i>	Total facility amount at quarter end \$A'000	Amount drawn at quarter end \$A'000
7.1 Loan facilities		
7.2 Credit standby arrangements		
7.3 Other (please specify)		
7.4 Total financing facilities	-	-
7.5 Unused financing facilities available at quarter end		-
7.6 Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.		

8. Estimated cash available for future operating activities	\$A'000
8.1 Net cash from / (used in) operating activities (item 1.9)	(461)
8.2 (Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	(385)
8.3 Total relevant outgoings (item 8.1 + item 8.2)	(846)
8.4 Cash and cash equivalents at quarter end (item 4.6)	1,073
8.5 Unused finance facilities available at quarter end (item 7.5)	-
8.6 Total available funding (item 8.4 + item 8.5)	1,073
8.7 Estimated quarters of funding available (item 8.6 divided by item 8.3)	1.27
<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>	
8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: The September 2023 quarter included annual claims fees and a vendor payment regarding our Golconda Project. The board does not expect to have the same level of operating cashflows in the December 2023 and March 2024 quarters.	
8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: Any further significant expenditure is subject to budgeting and Board approval. At this stage there are no large programs planned. The current cash position is sufficient to sustain the business.	

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer: Yes. Reduced field activities due to seasonal factors will see a significant reduction in cash outflow.

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: 18 October 2023

Authorised by: By the board
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
