

Tama Atacama Lithium Project

An Overview - May 2024

Tama Atacama Lithium Project

Major Port Infrastructure

Substantial Energy Infrastructure

Quality Road & Rail Infrastructure

Multiple Evaporation Operations

One of South America's largest and most strategically positioned lithium brine projects

Tier 1 Lithium Brine project located in a Tier 1 mining jurisdiction.

Circa 120,000ha (~1,200km²) of license area under Option for 100% containing ~74,600Ha (~746km²) of granted Exploration Concessions.

Total ~99,600Ha (~996km²) of granted Exploration Concessions.

High grade Li surface assays, up to 2,200ppm Li, average 700ppm Li.

- The Tama-Atacama Lithium Project comprises six key project areas in northern Chile, extending over 290km north to south and covering an area of approximately 1600km².
- Circa 1,200km² is under Option to purchase 100%, Circa 400km² is under MOU.
- Within the Optioned concessions ~746km² is under granted Exploration Concessions, with much of the remaining area expected to be granted first quarter 2024.
- Well-established geology and work completed to date confirms strong potential for Li brine deposits hosted in the Pampa del Tamarugal basin in the northern Atacama Desert.
- Project areas adhere to PAM's requirement for highly prospective projects which are easily accessible, close to all key infrastructure, with ample water supply.
- Highly elevated Li with 56 of 177 surface assays >270ppm Li averaging 700ppm Li and up to 2200ppm Li.
- Li anomalies are situated in a trend which extends ~160km from north to south.
- Elevated boron, potassium and magnesium commonly associated with elevated Li.
- Geochemical signature of surface salt crusts similar to that of Salar de Atacama.
- Projects have excellent infrastructure including major highway access, water (salt and fresh), solar power, nearby ports, airports, rail and major logistics hubs.
- Situated at an altitude of 800-1100m ASL in a hyper-arid environment with little to no rainfall and extreme evaporation.

Exceptionally high grade Lithium surface assays, up to 2,200ppm Li, averaging 700ppm Li

A Tier 1 Lithium Brine project located in a Tier 1 mining jurisdiction.

- Highly elevated Li with 56 of 177 surface assays >270ppm Li averaging 700ppm Li and up to 2200ppm Li.
- Li anomalies are situated in a trend which extends ~160km from north to south.
- Elevated boron, potassium and magnesium commonly associated with elevated Li.
- Geochemical signature of surface salt crusts similar to that of Salar de Atacama.

Chile National Lithium Strategy - Current Status

Note: Relevant ASX Releases are listed on Slide 15

Govt. has released a policy 'Framework' under which private companies can submit for a Special Lithium Operation Contract.

- Circa 1,200km² of PAM's ~1,600km² holding meet the requirement under the Framework.
- PAM's holdings about the western margin of the Pampa del Tamarugal Depression, the lowest section of the depression.
- ~850km² is situated in the north western section of the Depression, which has a strike length of 170km, under which a large portion is salt flat with highly anomalous Li in surface assays.

The area which has been excluded from the RFI process is strategic.

- This area can be explored for all other minerals.
- Had a drilling permit granted to previous operators in 2019.
- Will be retained as the policy framework is expected to loosen up.

Geophysical survey show basin sediments and brines up to 600m in depth

CX Z1F-003 (ENAP)

Empresa Nacional del Petróleo (ENAP) - Modified seismic cross section shows that sediments are shallowing slightly from east to west.

CX-L453 (CTL)

Transient electromagnetics (TEM) line shows a large low resistivity layers from ~200m below surface and continuing to 500m below surface.

A geological setting similar to brine deposits such as Salar de Atacama and Clayton Valley

Note: Relevant ASX Releases are listed on Slide 15

Tama Atacama is a large scale lithium brine project.

- The project is located approximately 150km due west of Salar de Uyuni in Bolivia, the world's largest salt flat, and 350km NNW of Salar de Atacama.
- At an altitude of 800-1100m, it is one of the lowest-lying lithium brine projects globally, 1.3km lower than Salar de Atacama and over 2.5km lower than sale de Maricunga and most other Salars in Chile and Argentina.
- The Project is also set in a hyper-arid environment with little to no rainfall and very high evaporation rates.
- The Project is situated in the zone of maximum evaporation.

Proximal to established and planned large scale Lithium chemical production

Antofagasta is Chile's lithium chemical manufacturing hub.

- Both SQM and Albemarle are large scale lithium chemical manufacturers, and have recently announced and/or completed expansions.
- This renders Tama Atacama as one of the few lithium brine projects in the global peer group which is proximal to large scale operating and planned lithium chemical production.
- Tama Atacama has serviceable rail access abutting or crossing most of its project areas, as well as Chile's Route 5, which is part of the Pan-American Highway.
- BYD and Tsingshan have signaled plans to build lithium chemical plants in Antofagasta.
- BASF SE is contemplating a lithium processing initiative in Chile
- Korean chemical manufacturers POSCO, SK On and LG Chem have been reported as showing interest in lithium chemical manufacturing in Chile.

A long history of minerals extraction in and around the Pampa del Tamarugal Basin

The Pampa del Tamarugal Basin has a history of mineral extraction, including borate, potassium, salt, precious and base metals.

- Potassium, precious and based metals are currently produced.
- West of the basin there are substantial areas of historic nitrate mining:
- Today nitrate mining as well as iodine and sulphate processing occur.

Proximity brings advantage, providing potential solutions for waste salt and water balance

Tama Atacama's proximity to key infrastructure and significant logistical advantages are notable.

- The Project is situated 40-60km from the coast and only 75km from Iquique, a well-equipped coastal city with a population of 200,000, a deep water bulk and container port, and regular flights to Santiago.
- The project is also only 75km from Port of Patillos, Chile's largest salt export terminal, providing PAM a potential solution for waste salt through export sales.
- Several pipelines pump sea water through PAM's project areas, providing a potential solution to achieving water balance.

Substantial energy infrastructure and a rapidly growing renewables grid

Note: Relevant ASX Releases are listed on Slide 15

The entire 1600km² area under Option Agreements and MOU is proximal to energy infrastructure.

- There is a multitude of Main Nodes and Substations adjacent to the project areas.
- Substantial solar capacity has been built with many projects currently under construction and planned.

Next Steps and Objectives

Note: Relevant ASX Releases are listed on Slide 15

Next steps and Objectives:

- Geophysics and drilling, begin drilling asap
- Aiming for lithium bearing aquifers at depth
- Upon identification conduct detailed drilling to defining an initial resource later in 2024
- Conduct evaporation testwork as well as submit bulk volumes of lithium brines for evaluation by various DLE providers.
- Preparations underway for RFI Submission.

Option Agreements structured attractively with significant achievable milestones

The Option to Purchase Agreements have timelines and expenditure commitments which are attractive and achievable when considered in the context of similar lithium brine project transactions in South America and the United States.

	Option Agreement 1	Option Agreement 2	Option Agreement 3 ⁽¹⁾
Project	Dolores North (~222km ²) Dolores South (~96km ²)	Pozon (~158km ²) Pink (~550km ²) Ramatisdos (northern portion of project area, approx. ~110km ²)	25 exploration concessions (~75km ²) in Salars Bellavista and Pintados and adjacent to the Project Pink exploration concessions.
Term	3 Years + 1 additional year by mutual Agreement	3 Years + 1 additional year by mutual Agreement	Agreement paused ⁽¹⁾
Earn In	100%	100%	100%
Management	PAM	PAM	PAM
Annual Licensing	PAM to meet all obligations including annual licensing payments to maintain titles in good standing		
Minimum Annual Spend	Not Applicable	Not Applicable	To Jan 'XX: US\$120,000 To Jan 'XX: US\$420,000 To Jan 'XX: US\$1,260,000
Option Payments	Dec '24: US\$100,000 Dec '25: US\$100,000 Dec '26: US\$2,000,000	Dec '24: US\$100,000 Dec '25: US\$100,000 Dec '26: US\$2,000,000	Jan 'XX: US\$66,000 Jan 'XX: US\$30,000 Jan 'XX: US\$90,000 Jan 'XX: US\$180,000 Jan 'XX: US\$600,000 CEOL: US\$1,800,000
Royalty	Not Applicable	Not Applicable	2% NSR with buyback options
See PAM ASX Announcements dated 02 Jan 2024 and titled 'Tama Atacama Lithium Option Agreements Signed' and 30 Apr 2024 and titled 'March 2024 Quarterly Activities Report' for further detail. 1. Agreement paused on 29 April 2024 and will remain paused until 31 March, 2025.			

Note: Relevant ASX Releases are listed on Slide 15

Important Information

Disclaimer

This presentation has been prepared by Pan Asia Metals Limited, a Singapore based company with Reg. No. 201729187E ('PAM' or 'Pan Asia' or 'Company'). This presentation has been prepared in good faith, as a summary only, and does not contain all information about Pan Asia's assets and liabilities, financial position and performance, profits and losses, prospects, and the rights and liabilities attaching to Pan Asia's securities. The securities issued by Pan Asia are considered speculative and there is no guarantee that they will make a return on the capital invested, that dividends will be paid on the shares or that there will be an increase in the value of the shares in the future. Pan Asia does not purport to give financial or investment advice. No account has been taken of the objectives, financial situation or needs of any recipient of this presentation. Certain information in this document has been derived from third parties and although PAM has no reason to believe that it is not accurate, reliable or complete, it has not been independently audited or verified by Pan Asia. Recipients of this presentation should carefully consider whether the securities issued by Pan Asia are an appropriate investment for them in light of their personal circumstances, including their financial and taxation position. Investors should make and rely upon their own enquiries before deciding to acquire or deal in the Company's securities.

Forward Looking Statements

Various statements in this presentation constitute statements relating to intentions, future acts and events which are generally classified as "forward looking statements". These forward looking statements are not guarantees or predictions of future performance and involve known and unknown risks, uncertainties and other important factors (many of which are beyond the Company's control) that could cause those future acts, events and circumstances to differ materially from what is presented or implicitly portrayed in this presentation. For example, future reserves or resources or exploration targets described in this presentation may be based, in part, on market prices that may vary significantly from current levels. These variations may materially affect the timing or feasibility of particular developments. Words such as "anticipates", "expects", "intends", "plans", "believes", "seeks", "estimates", "potential" and similar expressions are intended to identify forward-looking statements. Pan Asia cautions security holders and prospective security holders to not place undue reliance on these forward-looking statements, which reflect the view of Pan Asia only as of the date of this presentation. The forward-looking statements made in this presentation relate only to events as of the date on which the statements are made. Except as required by applicable regulations or by law, Pan Asia does not undertake any obligation to publicly update or review any forward-looking statements, whether as a result of new information or future events. Past performance cannot be relied on as a guide to future performance.

Important

To the extent permitted by law, PAM and its officers, employees, related bodies corporate and agents (Agents) disclaim all liability, direct, indirect or consequential (and whether or not arising out of the negligence, default or lack of care of PAM and/or any of its Agents) for any loss or damage suffered by a Recipient or other persons arising out of, or in connection with, any use or reliance on this presentation or information.

Competent Persons Statement

The information in this Public Report that relates to Exploration Targets, Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Mr David Hobby, who is a Member of the Australasian Institute of Mining and Metallurgy. Mr Hobby is an employee, Director and Shareholder of Pan Asia Metals Limited. Mr Hobby has sufficient experience that is relevant to the style of mineralization and type of deposit under consideration and to the activity that he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Hobby consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and that all material assumptions and technical parameters continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.

Notes and References

Third party data is generally sourced from professional and company reports and presentations, and PAM research. Any peer group comparisons comprise primarily listed companies.
