

PRODUCTION TESTING COMMENCES AT RBD01

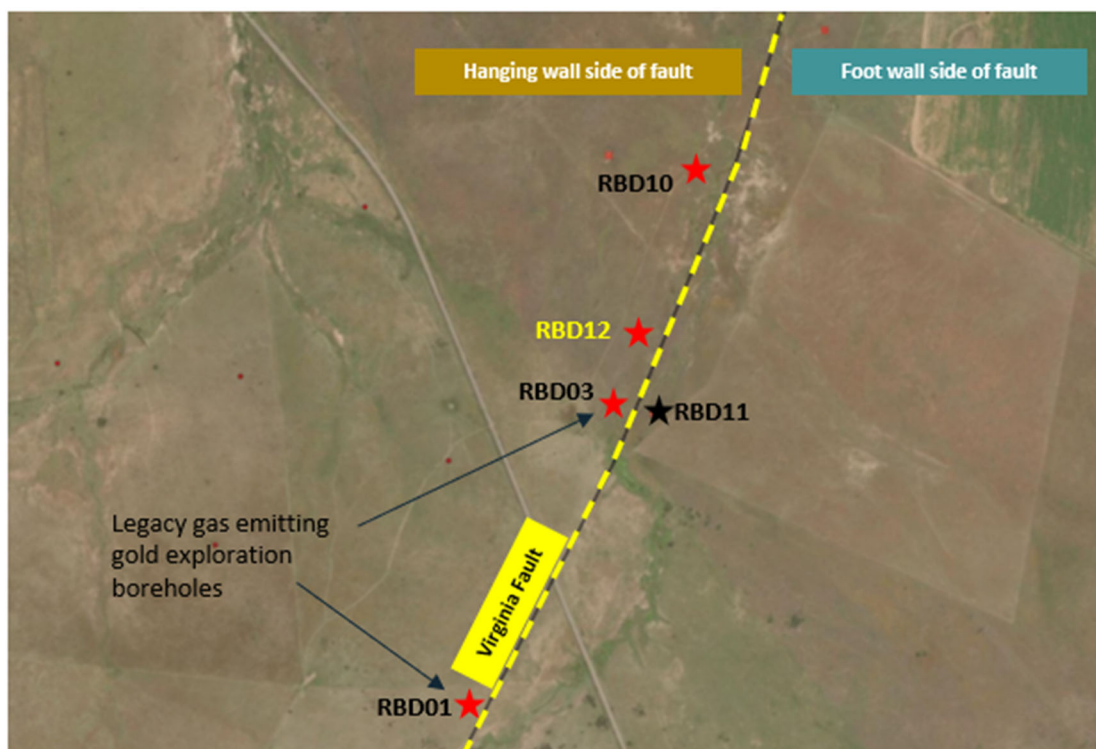

D3 Energy Limited (ASX: D3E) (D3 Energy or the Company) is pleased to announce the commencement of production testing at the historical RBD01 exploration borehole, located within ER315 in South Africa's Free State Province. Like RBD03, RBD01 was originally drilled in 1982 as a gold exploration borehole and has been flowing gas since that time, and now forms an important part of D3 Energy's multi-borehole testing program focused on helium and natural gas.

The production testing at RBD01 will evaluate reservoir characteristics, flow rates, and pressure responses, as well as gas composition, providing critical data to inform the Company's ongoing exploration and development strategy.

As part of its exploration and appraisal efforts, D3 Energy also recently completed drilling at RBD12, where gas-bearing zones were intersected and gas flowed to surface. RBD12 will be production tested post testing of RBD01.

This drilling and testing program forms part of the broader, methodical approach to unlocking the full potential of D3 Energy's helium and natural gas resources within the ER315 permit.

Results from RBD01 will contribute to the assessment of resource potential within ER315, supporting the future application for a Production Right.
