Stavely Project – Control major Cu-Au fertile Volcanic Belts

Discovery – outstanding shallow high-grade copper-gold-silver discovery (September 2019), the Cayley Lode¹

Stavely Minerals strategy to realise value in the Cayley Lode discovery is two-fold:

1. Discover more copper resources – Junction (access is a priority).
2. Pursue a gold discovery strategy – adding a copper floatation circuit to a gold plant is a modest additional cost

Multiple regional discovery opportunities:

- Fairview North gold prospect – great recent drilling results²
- Fairview South gold prospect – great recent drilling results³
- S41 breccia-hosted gold – 2km x 750m breccia pipe
 - Only 1 x diamond drill hole in large system, scale potential⁴
 - Drilling in-progress

Stavelly Project – Control major Cu-Au fertile Volcanic Belts

Discovery – outstanding shallow high-grade copper-gold-silver discovery (September 2019), the Cayley Lode¹

Multiple regional discovery opportunities:

- Fairview North gold prospect – great recent drilling results²
- Fairview South gold prospect – great recent drilling results³, Phase 3: 9 x RC drill holes completed, assays pending
- S41 breccia-hosted gold – 2km x 750m breccia pipe
 - Only 1 x diamond drill hole in large system, scale potential⁴
 - Reconnaissance RC drilling on-going, 14 holes planned, subject to change as program progresses

Stavelly Minerals controls tenure over some 130km of various components of the Stavelly Arc, an Andean-style continental margin volcanic arc that is well preserved and prospective for several world-class styles of gold mineralisation in addition to the demonstrated copper fertility.

Fairview South Soil Auger Geochemistry

Fairview South gold in soil auger anomaly continues south¹.

Phase 3 RC drilling (9 holes) has been completed, assays pending

- Paddock to the east (under wheat crop) hosts abundant float and outcrop of jasperoid (indicating silica-hematite metasomatism) and chalcedonic silica / ?adularia indicating a low-temperature low-sulphidation affinity.
- Stavely Minerals is not suggesting any grade implications, simply that the area displays a complex history of mineralisation styles from quartz-pyrite-gold (existing drill results), high temperature metasomatism (jasperoid) with magnetite, and low-temperature, low-sulphidation affinity chalcedony and adularia.

Emerging Discovery? The S41 Breccia Prospect

S41 Breccia-Hosted Gold Prospect

- Identified in Stavely Minerals' Falcon Gravity Gradiometer® survey beneath 50m of basalt
- We are the first to see this gold mineralized system:
 - Identified the geophysical anomaly
 - Drilled through the basalt to discover the gold-base metal anomaly
 - Diamond drilled it and identified the style of system it is: carbonate – base metal – gold
 - Well studied style of gold deposit “most prolific gold production from the SW Pacific Rim” is from this style of gold deposit
- Scale potential for discovery

Reconnaissance RC drilling in-progress.

Emerging Discovery? The S41 Breccia Prospect

S41 Prospect Aircore¹

- **4m at 2.21g/t Au** from 96m drill depth, including:
 - **2m at 3.92g/t Au** from 98m in aircore drilling
- Large 2km x 750m alteration zone
- Strongly anomalous base metals and pathfinder geochemistry
- Very wide-spaced aircore drilling at 400m centres (let's call that 3 x football fields apart)

BIG target

¹See ASX announcement 9 April 2023

The S41 Breccia Prospect – first look STDD001

S41 Diamond Drill Hole¹

- Only one diamond drill hole in the 2,000m x 750m interpreted breccia system
- **1m at 2.16g/t Au** from 282m drill depth
- **37m at 0.10g/t Au**, including:
 - **2m at 0.56g/t Au** from 320m, and
 - **5m at 24.3g/t Ag** from 353m
- Importantly demonstrated that there is gold and silver in the system associated with Mn-carbonate and Zn & Pb base metals
- Breccia-hosted systems host notoriously inconsistent gold mineralization, commonly in sheeted veins on the pipe margin eg. Kidston
- Need to find better ‘plumbing’ on the edge

Very large hydrothermal system. Gold in the system.

Large-scale discovery opportunity

¹See ASX announcement 9 April 2023

The S41 Breccia-Hosted Gold Prospect

- Map out sulphides with IP

S41 Prospect Geophysics¹

- Proposed Induced Polarisation (IP) geophysical program
- Should 'see' through the basalt and identify zones of better developed sulphide mineralisation
- Follow-up aircore drilling and then, based on results, likely RC / diamond drilling – including extending STDD001
