

10 June 2025

Pathfinder 38 Clarification

Castile Resources Limited (**ASX:CST**) (**Castile** or the **Company**) refers to the announcement dated 2 June 2025 titled "*Copper Gold Mineralisation Detected at Pathfinder 38*" (**Announcement**).

As advised in the announcement, the Company believes that hole 25P38D001 intersected the edge of an IOCG formation at multiple depths including:

- a zone of distal silica-hematite alteration between 253m and 277m indicating mineralisation may occur to the north;
- a zone of strong magnetite replacement of jasper with pyrite in a parasitic fold between 395.35 and 396.2m which replicates the structural setting at Castile's flagship Rover 1 deposit;
- chlorite alteration and associated disseminated magnetite with elevated copper up to 30 times background (max 770ppm) between 580.9m and 612.35m down hole;

however, no reportable assay results were received above the cut-off grade of 1% Cu.

This announcement has been authorised by the Board of Castile Resources Limited.

CASTILE RESOURCES LIMITED

Castile is developing the Rover 1 Project within the prolific gold-copper mining province of Tennant Creek in the Northern Territory. The Rover 1 PFS Rover 1 revealed a financially robust, polymetallic, high-grade iron oxide copper gold (IOCG) deposit that will produce gold doré, copper and cobalt metal and high-grade magnetite. High purity (99%) copper and cobalt metal produced will be available for sale to EV and battery manufacturers directly from Castile. The gold doré and 96.5% magnetite product (suitable for green steel) provide further diversity and revenue streams. Castile has been awarded Major Project Status by the NT Government and is engaged with NT Land Corp on a parcel of land within the Middle Arm Sustainable Development Precinct.
