Investor Briefing | Webinar
Wednesday, 22 October 2025 at 9.00am AWST

Caspin Resources Limited (ASX: CPN) ("**Caspin**" or the "**Company**) is pleased to invite shareholders and investors to a webinar hosted by Managing Director, Greg Miles.

The Webinar will provide a presentation on the status and future plans at the Bygoo Tin Project and upcoming drilling at the Weethalle Gold Project, followed by a Q&A.

Shareholders and investors are invited to register using the Webinar URL link for the free webinar below:

WEBINAR URL:	https://us06web.zoom.us/webinar/register/WN_DKUjWO99Qf-RNYhgKBiuYw
DATE:	**Wednesday, 22 October 2025**
TIME:	**9.00am AWST | 12.00pm AEST**
DURATION:	**~40 minutes**

After registering, you will receive a confirmation email containing a calendar invitation and information about joining the webinar.

Investors are invited to submit questions prior to the event via the registration page.

This announcement has been authorised for release to the ASX by the Board of Caspin Resources Limited.

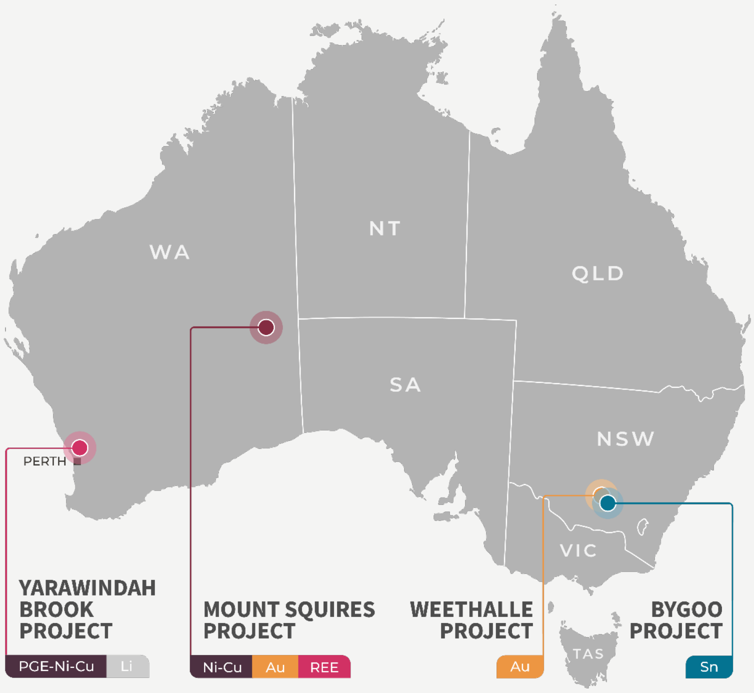
ABOUT CASPIN:

Caspin Resources Limited (ASX Code: **CPN**) is a mineral exploration company based in Perth, Western Australia, with expertise in early-stage exploration and development. The Company currently has three Australian projects offering a diverse mix of commodities and excellent opportunity to add value through exploration and discovery.



- The Company's flagship project is the **Bygoo** Project in New South Wales, an advanced, high-grade tin project located in a prolific Wagga tin belt. The project surrounds the Ardlethan Mine, one of Australia's largest producing tin mines on mainland Australia before it closed in 1986. The Company recently announced its maiden Inferred Resource Estimate of 3.94mt @ 0.5% Sn for 19,300t of contained tin.
- The Company has recently acquired an option to earn 80% of the **Weethalle** Project in NSW, a short distance north of the Bygoo Project. The Project is prospective for large-scale intrusive related gold mineralisation, with a structural setting similar to the Hemi deposit in Western Australia. Compelling geophysical and geochemical anomalies have never been drill tested.
- The **Yarawindah Brook** and **Mount Squires** Projects are new frontier projects located in WA and prospective for Ni-Cu-PGE sulphide mineralisation. Both projects are located in frontier magmatic sulphide provinces with large scale deposits nearby. The Company believes these projects have long-term strategic value and is pursuing avenues to advance alongside its NSW assets.

These projects are strategically positioned in Australia's premier mineral districts, providing excellent exposure to new critical and technology mineral markets.

The Tin Market

Tin is a high value metal that currently trades at about 3.5 times the copper price. Just over 50% of global tin production is used in solder, the connection material used in circuit boards and other electric components. For this reason, tin is often considered a 'technology metal', increasingly important to support growing demand for electrification and computing, from solar panels to AI data centres. Understandably, tin is on the US critical minerals list and the strategic mineral list in Australia.

A large portion of global production has environmental (subsea dredging) and social (artisanal mining, conflict regions) concerns. Australia contrasts as an attractive destination for tin investment, being a safe first-world jurisdiction with high environmental and social standards.
